man

```
APT(8)                                APT                                APT(8)

NAME
  apt - command-line interface

SYNOPSIS
  apt [-h] [-o=config_string] [-c=config_file] [-t=target_release]
      [-a=architecture] {list | search | show | update |
      install pkg [{=pkg_version_number | /target_release}]... |
      remove pkg... | upgrade | full-upgrade | edit-sources |
      {-v | --version} | {-h | --help}}
```

DESCRIPTION

apt provides a high-level commandline interface for the package management system. It is intended as an end user interface and enables some options better suited for interactive usage by default compared to more specialized APT tools like **apt-get(8)** and **apt-cache(8)**.

Much like **apt** itself, its manpage is intended as an end user interface and as such only mentions the most used commands and options partly to not duplicate information in multiple places and partly to avoid overwhelming readers with a cornucopia of options and details.

Manual page apt(8) line 1/157 15% (press h for help or q to quit)
